

Animal Adaptations Project

Scoring Rubric · 100 Points Total

Category	Description	Points
Animal Description	Name, classification, size, diet, and cool facts are accurate and complete.	10
Environment Details	Biome, climate, location, food web, and dangers are clearly explained.	10
Current Adaptations	3-5 adaptations identified, correctly typed (structural / behavioral / physiological), and explained.	20
New Environment	A new biome or human-changed environment is clearly described with relevant details.	10
Future Adaptations	3-5 future adaptations are predicted, scientifically grounded, and explained logically.	20
Reflection & Writing	Summary and reflection questions are thoughtful, complete, and well-written.	15
Creativity & Effort	Visuals, AI-assisted concepts, and overall presentation show care and originality.	15
TOTAL		100

Notes for Educators

This rubric pairs with the Animal Adaptations Template (.pptx). Current Adaptations and Future Adaptations carry the most weight (20 points each) since they represent the core research and AI-assisted reasoning skills the project is designed to build. Encourage students to verify any AI-generated claim about their animal's biology against a second source before including it.
